

## Integral SVR-PRO 200 SMW 2.5" SATA 6Gbps SSD

100 GB

200 GB

400 GB

800 GB

3.2 TB

6.4 TB

### INTRODUCTION

The SVR-PRO 200 SMW SSD range is designed for mixed workload applications, offers up to a massive 6.4TB of data storage and features superior endurance (up to 11,680 TBW) for a SATA SSD complimented by consistently low latency and a high level of read and write IOPS, together with power loss protection.

### PRODUCT OVERVIEW

Delivers solid I/O cost-to-performance benefits for applications that demand low latency read speeds and greater bandwidth for server and storage environments for Serial Advanced Technology Attachment (SATA)-based systems in capacities of 100GB, 200GB, 400GB, 800GB, 3.2TB and 6.4TB.

Uses a single-chip controller with a SATA interface on the system side and 8-channels of Flash internally. The industry-standard 2.5-inch form factor enables interchangeability with existing hard disk drives (HDDs) and native SATA HDD drop-in replacement with the enhanced performance, reliability, ruggedness, and power savings offered by an SSD.

SVR-PRO 200 has the capacity you require for high-performance computing with exceptional reliability for storage-hungry, critical SATA based systems.

### BENEFITS

- Highest endurance SATA SSD
- High capacity SSD for big data storage (3.2TB and 6.4TB)
- Designed for mixed workloads
- Reduced latencies
- Lower Power Consumption
- Non-volatile Flash Memory for outstanding data retention - Less likely to fail than HDD
- Shock resistance - No moving parts enable the product to be used in tougher conditions
- Silent operation - Noiseless and low heat dissipation
- Much less heat generated than conventional HDD

### FEATURES

- Exceptional TBW performance - Up to 11,680 (6.4TB model)
- 2.5" form factor with SATA III 6Gbps interface (backwards compatible with SATA 3Gbps and SATA 1.5Gbps)
- Sequential Read up to 551MB/s and Write up to 518MB/s<sup>1</sup>
- Random Read IOPS up to 80K, Random Write up to 80K<sup>3</sup>
- Supports S.M.A.R.T. - Self-Monitoring, Analysis and Reporting Technology
- Features an internal temperature sensor with an accuracy of +/-2°C over a range of -40°C to +125°C which can be monitored using a SMART attribute BEh
- The SSD hardware is built with a number of capacitors that ensure that the data in the write cache of the SSD is protected against corruption if a power loss was to occur, enabling the SSD to complete the last write command to the NAND flash. CE and FCC compliant
- 5 Year Warranty or maximum endurance use

CAPACITIES & INTERFACE	
Capacities available	100GB, 200GB, 400GB, 800GB
Form Factor	2.5 Inch
Interface	SATA III 6Gbps (also Compatible with SATA II 3Gbps and SATA 1.5Gbps)
Controller	Novachips
NAND	MLC
DIMENSIONS	
Length mm	100.45
Width mm	69.85
Height mm	7mm
Weight	100g
Sequential Performance up to <sup>1</sup>	Read: 100GB = 520MB/s 200GB = 520MB/s 400GB = 520MB/s 800GB = 520MB/s Write: 100GB = 150MB/s 200GB = 300MB/s 400GB = 500MB/s 800GB = 500MB/s
Random Performance <sup>3</sup>	Read: 100GB = 40K IOPS 200GB = 70K IOPS 400GB = 80K IOPS 800GB = 80K IOPS Write: 100GB = 40K IOPS 200GB = 70K IOPS 400GB = 70K IOPS 800GB = 80K IOPS
Typical Latency <sup>2</sup>	Read: 65us, Write: 40us
Operating Temp <sup>4</sup>	0 to 70°C
Humidity	5% to 95%, non-condensing

POWER CONSUMPTION	
Supply Voltage	4.5V minimum – 5.5V maximum
Power Consumption <sup>7</sup> Active Maximum 128KB sequential write	100GB = 360mW 200GB = 440mW 400GB = 470mW 800GB = 520mW
Idle Average <sup>7</sup>	145mW
Shock (operating and non operating) Maximum	1000G, duration 0.5ms
Vibration Maximum	Operating 2.17 Grms (5-700Hz, Non-Operating 3.13 Grms (5-800Hz)
Supports SMART	Yes
MTBF <sup>5</sup>	2 Million Hours
Endurance <sup>6</sup>	3 DWPD
<b>WARRANTY</b>	5 YEARS or Maximum Endurance 3 DWPD
Compliance	CE, FCC, RoHS
Bulk Weight	100g
Packaged Weight	158g
Packaged Dimensions (mm)	L = 133 W = 117 H = 13

CAPACITY	PART CODE	BARCODE (EAN)
100GB	INSSD100GS625SVR2SMW	
200GB	INSSD200GS625SVR2SMW	5055288437388
400GB	INSSD400GS625SVR2SMW	5055288437395
800GB	INSSD800GS625SVR2SMW	

Notes:

- Actual performance may vary and depends on use conditions, host and environment
- 4KB transfers used for Read/Write latency values.
- Typical I/O performance numbers as measured fresh-out-of-the-box (FOB) using IOMeter with a queue depth of 32 and write cache enabled.
- Operating temperature is the drive case temperature as measured by the SMART temperature attribute
- Mean Time Between Failures is estimated based on JEDEC-218/219 standard methodology.
- TBW (Total bytes) DWPD (Drive Write Per Day). TBW and DWPD is a measurement of SSDs expected lifespan, which represents the amount of data written to the device. This is only an estimate and can differ based in user usage behaviour, platform and estimates provided by the flash vendor
- Power Consumption may differ according to flash configuration and platform

All Specifications are subject to change without notice

1GB = 1,000,000,000 Bytes, 1TB = 1,000,000,000,000 Bytes; 1 sector = 512 Bytes.

The total usable capacity of the SSD may be less than the total physical capacity because a small portion of the capacity is used for NAND flash management and maintenance purposes.

Physical Dimensions  
(2.5" 7mm z-height)

## 1.1 SUPPORTED COMMAND SETS

Table 1. Supported Command Sets

COMMAND NAME	COMMAND CODE (HEX)
CHECK POWER MODE	E5h or 98h
DEVICE RESET	08h
DEVICE CONFIGURATION	
DEVICE CONFIGURATION FREEZE LOCK	B1h/C1h
DEVICE CONFIGURATION IDENTIFY	B1h/C2h
DEVICE CONFIGURATION RESTORE	B1h/C0h
DEVICE CONFIGURATION SET	B1h/C3h
DOWNLOAD MICROCODE	92h

SMART	
SMART DISABLE OPERATIONS	B0h/D9h
SMART ENABLE OPERATIONS	B0h/D8h
SMART ENABLE/DISABLE ATTRIBUTE AUTOSAVE	B0h/D2h
SMART EXECUTE OFF-LINE IMMEDIATE	B0h/D4h
SMART READ ATTRIBUTE THRESHOLDS	B0h/D1h
SMART READ DATA	B0h/D0h
SMART READ LOG	B0h/D5h
SMART RETURN STATUS	B0h/DAh
SMART SAVE ATTRIBUTE VALUES	B0h/D3h
SMART WRITE LOG	B0h/D6h
STANDBY	E2h or 96h
STANDBY IMMEDIATE	E0h or 94h
SOFT RESET	FFh
WRITE BUFFER	E8h
WRITE DMA	CAh
WRITE DMA EXT	35h
WRITE FPDMA QUEUED	61h
WRITE LOG EXT	3Fh
WRITE MULTIPLE	C5h
WRITE MULTIPLE EXT	39h
WRITE SECTOR(S)	30h
WRITE SECTOR(S) EXT	34h

## 1.2 SMART

### 1.2.1 SMART SUBCOMMAND SETS

In order to select a subcommand the host must write the subcommand code to the device's Features Register before issuing the SMART Function Set command. The subcommands are listed below.

Table 2. SMART Subcommand Sets

COMMAND	COMMAND CODE (HEX)
SMART READ DATA	D0h
SMART ENABLE/DISABLE ATTRIBUTE AUTOSAVE	D2h
SMART EXECUTE OFF-LINE IMMEDIATE	D4h
SMART READ LOG	D5h
SMART WRITE LOG	D6h
SMART ENABLE OPERATIONS	D8h
SMART DISABLE OPERATIONS	D9h
SMART RETURN STATUS	DAh

### 1.2.2 SMART READ DATA (SUBCOMMAND D0H)

This subcommand returns the device's Attribute Values to the host. The Attribute Values consist of 512bytes.

Table 3. Device Attribute Data Structure

BYTE	DESCRIPTION
0~1	Data structure revision number (Vendor Specific)
2~361	1st - 30th Individual attribute data (Vendor Specific)
362	Off-line data collection status
363	Self-test execution status
364~365	Total time in seconds to complete off-line data collection activity
366	Vendor Specific
367	Off-line data collection capability
368-369	SMART capability
370	Error logging capability 7-1 Reserved 0 1=Device error logging supported
371	Self-test failure check point (Vendor Specific)
372	Short self-test routine recommended polling time(in minutes)
373	Extended self-test routine recommended polling time(in minutes)
374-510	Reserved
511	Data structure checksum

Table 4. Individual Attribute Data Structure

BYTE	DESCRIPTION
0	Attribute ID Number
1~2	Flags
3	Current Value
4	Worst Value
5~10	Attribute Value (FFFF FFFF FFFFh)
11	Reserved

Table 5. Attribute ID Numbers

ID (DEC)	ID (HEX)	ATTRIBUTE NAME	DESCRIPTION
1	01h	Vendor-specific	
9	09h	Power-On Hours	The time amount of power-on state (unit: hours)
12	0Ch	Power Cycle Count	Counts of full power on/off cycles
13	0Dh	Vendor-specific	
181	AFh	Program Failure Block Count	Counts the number of flash program failures 00~23 : flash program failure count / 24~47 : flash erase failure count
184	B8h	Initial Bad Block Count	The number of bad blocks which was detected when firmware was installed
187	BBh	Read Failure Block Count (Uncorrectable)	Uncorrectable read failure block count 00~23 : read bad block count / 24~47 : potential read bad block count
190	BEh	Temperature	Current device temperature (unit: °C)
199	C7h	SATA Error CRC Count	The number of encountered SATA interface errors 00~23 : CRC Error count / 24~47 : Handshake Error Count
200	C8h	Total count of write commands	The total number of written command during the entire lifetime of the device
201	C9h	Total count of read commands	The total number of read command during the entire lifetime of the device
202	CAh	Vendor-specific	
204	CCh	Vendor-specific	
209	D1h	SSD Life Left (Remaining Drive Life)	Indicates the approximate SSD life left [(maximum PE cycle – average erase count) / maximum PE cycle]
210	D2h	Erase Count	Indicates the minimum, average, maximum erased counts of all the blocks 00~15 : The minimum erased count 16~31 : The average erased count 32~47 : The maximum erased count
213	D5h	20h	Returns maximum PE cycle counts of flash
225	E1h	24h	
226	E2h	40h	Flush command count 00~23 : self flush count / 24~47 : host flush count
227	E3h	42h	
228	E4h	F6h	
229	E5h	F3h	
230	E6h	F4h	The current total free blocks count
241	F1h	F5h	
242	F2h	TRIM remain amount	Remaining TRIM amount

## 1.2.3 SMART SAVE ATTRIBUTE VALUES (SUBCOMMAND D3H)

This subcommand causes the device to immediately save any updated Attribute Values to the device's Attribute Data sector regardless of the state of the Attribute Autosave feature.

## 1.2.4 SMART EXECUTE OFF-LINE IMMEDIATELY (SUBCOMMAND D4H)

This subcommand causes the device to start the off-line process for the requested mode and operation. The LBA Low register shall be set to specify the operation to be executed.

Table 6. SMART Execute Off-line Immediately

LBA LOW	DESCRIPTION
00h	Execute SMART off-line data collection routine immediately
01h	Execute SMART Short self-test routine immediately in off-line mode
02h	Execute SMART Extended self-test routine immediately in off-line mode
03h	Reserved
04h	Execute SMART Selective self-test routine immediately in off-line mode
40h	Reserved
7Fh	Abort off-line mode self-test routine
81h	Execute SMART short self-test routine immediately in captive mode
82h	Execute SMART Extended self-test routine immediately in captive mode
84h	Execute SMART selective self-test routine immediately in captive mode
C0h	Reserved

## OFF-LINE MODE

The device executes command completion before executing the specified routine. During execution of the routine the device will not set BSY nor clear DRDY. If the device is in the process of performing its routine and is interrupted by a new command from the host, the device will abort or suspend its routine and service the host within two seconds after receipt of the new command. After servicing the interrupting command, the device will resume its routine automatically or not start its routine depending on the interrupting command.

## CAPTIVE MODE

When executing self-test in captive mode, the device sets BSY to one and executes the specified self-test routine after receipt of the command. At the end of the routine, the device sets the execution result in the Self-test execution status byte (see Table 7-1: "Device Attribute Data Structure" on page 23) and ATA registers and then executes the command completion. See definitions below.

**Status** - Set ERR to one when the self-test has failed

**Error** - Set ABRT to one when the self-test has failed

**LBA Low** - Set to F4h when the self-test has failed

**LBA High** - Set to 2Ch when the self-test has failed

## 1.2.5 SMART READ LOG SECTOR (SUBCOMMAND D5H)

This command returns the specified log sector content to the host. LBA Low and Sector Count Registers shall be set to specify the log sector and sector number to be written.

Table 7. SMART Read Log Sector

LOG SECTOR ADDRESS	NO. SECTOR	CONTENT	
00h	1	Log directory	Read Only
01h	1	SMART error log	Read Only
02h	51	Comprehensive SMART error log	Read Only
03h	37	Extended Comprehensive SMART error log	Read Only
06h	1	SMART self-test log	Read Only
07h	1	Extended SMART self-test log	Read Only
09h	1	Selective self-test log	Read and Write
10h	1	NCQ Error log	Read only
11h	1	SATA Phy event counter log	Read only
80h-9Fh	32	Host vendor specific	Read and Write

Table 8. SMART Log Directory

BYTE	DESCRIPTION
0~1	SMART Logging Version (set to 01h)
2~3	Number of sectors in the log at log address 1
4~5	Number of sectors in the log at log address 2
...	
510~511	Number of sectors in the log at log address 255

Table 9. Self-test log structure

BYTE	DESCRIPTION
0~1	Data structure revision
n*24+2	Self-test number
n*24+3	Self-test execution status
n*24+4~n*24+5	Life timestamp
n*24+6	Self-test failure check point
n*24+7~n*24+10	LBA of first failure
n*24+11~n*24+25	Vendor specific
.....	.....
506~507	Vendor specific
508	Self-test log pointer
509~510	Reserved
511	Data structure checksum

N is 0 through 20

The data structure contains the descriptor of the Self-test that the device has performed. Each descriptor is 24 bytes long and the self-test data structure is capable to contain up to 21 descriptors. After 21 descriptors have been recorded, the oldest descriptor will be overwritten with the new descriptor. The self-test log pointer points to the most recent descriptor. When there is no descriptor, the value is 0. When there are descriptor(s), the value is 1 through 21.

Table 10. Selective self-test log structure

BYTE	CONTENT	REMARKS
0-1	Data structure revision	Read and Write
2-9	Starting LBA for test span 1	Read and Write
10-17	Ending LBA for test span 1	Read and Write
18-25	Starting LBA for test span 2	Read and Write
26-33	Ending LBA for test span 2	Read and Write
34-41	Starting LBA for test span 3	Read and Write
42-49	Ending LBA for test span 3	Read and Write
50-57	Starting LBA for test span 4	Read and Write
58-65	Ending LBA for test span 4+	Read and Write
66-73	Starting LBA for test span 5	Read and Write
74-81	Ending LBA for test span 5	Read and Write
82-337	Reserved	Reserved
338-491	Vendor specific	Vendor specific
492-499	Current LBA under test	Read
500-501	Current span under test	Read
502-503	Feature flags R/W	Read and Write
504-507	Vendor Specific	Vendor specific
508-509	Selective self test pending time	Read and Write
510	Reserved	Reserved
511	Data structure checksum	Read and Write

### 1.2.6 SMART WRITE LOG SECTOR (SUBCOMMAND D6H)

This command writes 512 bytes of data to the specified log sector. LBA Low and Sector Count registers shall be set to specify the log address and sector number to be written.

### 1.2.7 SMART ENABLE OPERATIONS (SUBCOMMAND D8H)

This subcommand enables access to all SMART capabilities. Prior to receipt of a SMART Enable Operations subcommand, Attribute Values are neither monitored nor saved by the device. The state of SMART—either enabled or disabled—will be preserved by the device across power cycles. Once enabled, the receipt of subsequent SMART Enable Operations subcommands will not affect any of the Attribute Values.

### 1.2.8 SMART DISABLE OPERATIONS (SUBCOMMAND D9H)

This subcommand disables all SMART capabilities. After receipt of this subcommand the device disables all SMART operations. Non self-preserved Attribute Values will no longer be monitored. The state of SMART - either enabled or disabled - is preserved by the device across power cycles. Note that this subcommand does not preclude the device's power mode attribute auto saving.

After receipt of the SMART Disable Operations subcommand from the host, all other SMART subcommands except SMART Enable Operations are disabled and will be aborted by the device returning the error code as specified in "SMART Error Codes".

Any Attribute Values accumulated and saved to volatile memory prior to receipt of the SMART Disable Operations command will be preserved in the device's Attribute Data Sectors. If the device is re-enabled, these Attribute Values will be updated, as needed, upon receipt of a SMART Read Attribute Values or a SMART Save Attribute Values command.

### 1.2.9 SMART RETURN STATUS (SUBCOMMAND DAH)

This subcommand is used to communicate the reliability status of the device to the host's request. Upon receipt of the SMART Return Status subcommand the device saves any updated Attribute Values to the reserved sector, and compares the updated Attribute Values to the Attribute Thresholds.

## 1.3 IDENTIFY DEVICE COMMAND DATA

Table 11. Returned Sector Data

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
0	X	0040h	General configuration bit-significant information
1	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
2	V	C837h	Specific configuration
3	X	0010h	Obsolete - Number of logical heads (16)
4-5	X	0h	Retired
6	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
7-8	V	0h	Reserved for assignment by the CompactFlash* Association (CFA)
9	X	0h	Retired
10-19	F	varies	Serial number (20 ASCII characters)
20-21	X	0h	Retired
22	X	0000h	Obsolete
23-26	F	varies	Firmware revision (8 ASCII characters)
27-46	F	varies	Model number
47	F	8001h	Maximum number of sectors transferred per interrupt on multiple commands
48	F	4000h	Trusted Computing Feature Set
49	<b>F</b>	2F00h	Capabilities
50	F	4000h	Capabilities
51-52	X	0h	Obsolete
53	F	0007h	Words 88 and 70:64 valid
54	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
55	X	0010h	Obsolete - Number of logical heads (16)
56	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
57-58	X	0h	Obsolete
59	F	0101 h	Number of sectors transferred per interrupt on multiple commands
60-62	V	varies	Total number of user-addressable sector
63	X	0407h	Multi-word DMA modes supported/selected
64	F	0003h	PIO modes supported
65	F	0078h	Minimum multiword DMA transfer cycle time per word
66	F	0078h	Manufacturer's recommended multiword DMA transfer cycle time
67	F	0078h	Minimum PIO transfer cycle time without flow control
68	F	0078h	Minimum PIO transfer cycle time with IORDY flow control
69	F	4020h	Additional Supported
70	F	0000h	Reserved
71-74	F	0h	Reserved for IDENTIFY PACKET DEVICE command
75	F	001Fh	Queue depth
76	F	050Eh	Serial ATA capabilities
77	F	0006h	Reserved for future Serial ATA definition
78	F	0044h	Serial ATA features supported
79	V	0044h	Serial ATA features enabled
80	F	01E0h	Major version number

NOTES:

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
81	F	0000h	Minor version number
82	F	346Bh	Command set supported
83	F	7D01h	Command sets supported
84	F	4122h	Command set/feature supported extension
85	V	3469h	Command set/feature enabled
86	V	3C01h	Command set/feature enabled
87	V	4122h	Command set/feature default
88	V	007Fh	Ultra DMA Modes
89	F	0004h	Time required for security erase unit completion
90	F	0004h	Time required for enhanced security erase completion
91	V	0000h	Current advanced power management value
92	V	FFFEh	Master Password Revision Code
93	X	0000h	Hardware reset result: the contents of bits (12:0) of this word shall change only during the execution of a hardware reset
94	V	0000h	Vendor's recommended and actual acoustic management value
95	F	0000h	Stream minimum request size
96	V	0000h	Streaming transfer time - DMA
97	V	0000h	Streaming access latency - DMA and PIO
98-99	F	0000h	Streaming performance granularity
100-103	V	Varies	Maximum user LBA for 48-bit address feature set
104	V	0000h	Streaming transfer time - PIO
105	V	0001h	Maximum number of 512-byte blocks of LBA Range Entries per DATASET MANAGEMENT command
106	F	4000h	Physical sector size / logical sector size
107	F	0000h	Inter-seek delay for ISO-7779 acoustic testing in microseconds
108-111	F	varies	Unique ID
112-115	F	0h	Reserved for world wide name extension to 128 bits
116	V	0000h	Reserved for technical report
117-118	F	0h	Words per logical sector
119	F	0000h	Supported settings
120	F	0000h	Command set/feature enabled/supported
121-126	F	0h	Reserved
127	X	0000h	Removable Media Status Notification feature set support
128	V	0001h	Security status
129	V	0000h	Vendor-specific
130-159	X	0h	Vendor-specific
160	X	0000h	CompactFlash Association (CFA) power mode 1
161-167	X	0h	Reserved for assignment by the CFA
168	X	0003h	Reserved for assignment by the CFA
169	X	0001h	Data set management Trim attribute support
170-175	F	0h	Reserved for assignment by the CFA
176-205	X	0h	Current media serial number
206	X	0000h	SCT Command Transport
207-208	F	0h	Reserved
209	X	4000h	Alignment of logical blocks within a physical block

**NOTES:**

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
210-211	V	0h	Write-Read-Verify Sector Count Mode 3 (DWord)
212-213	F	0h	Write-Read-Verify Sector Count Mode 2 (DWord)
214	X	0000h	NV Cache Capabilities
215-216	V	0h	NV Cache Size in Logical Blocks (DWord)
217	F	0001h	Nominal media rotation rate
218	V	0000h	Reserved
219	F	0000h	NV Cache Options
220	V	0000h	Write-Read-Verify feature set
221	X	0000h	Reserved
222	F	103Fh	Transport major version number
223	F	0000h	Transport minor version number
224-229	F	0h	Reserved
230-233	X	0h	Extended Number of User Addressable Sectors (QWord)
234	F	0000h	Minimum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
235	F	0000h	Maximum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
236-254	X	0h	Reserved
255	V	varies	Integrity word

**NOTES:**

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.

## Integral SVR-PRO 200 SMW 2.5" SATA 6Gbps SSD

### INTRODUCTION

The Integral SVR-PRO 200 SMW SATA III 6Gbps 2.5" SSD is specifically engineered to provide the highest endurance in drive capacities of 3.2TB and 6.4TB. The best big data, high-endurance SSD solution for server and desktop computing environments. Ideal for mixed workloads and performance hungry applications including Tier 1 storage, online transaction processing, email servers, high performance computing and cloud data warehousing. Power-users, content editors, graphic designers and general multi-taskers will all benefit from an ultra-responsive system as well as the high-endurance characteristics.

### PRODUCT OVERVIEW

The SVR-PRO 200 SMW SSD range is designed for mixed workload applications, offers up to a massive 6.4TB of data storage and features superior endurance (up to 11,680 TBW) for a SATA SSD complimented by consistently low latency and a high level of read and write IOPS, together with power-loss protection.

Delivers solid I/O cost-to-performance benefits for applications that demand low latency read speeds and write speed for server and storage environments for Serial Advanced Technology Attachment (SATA)-based systems in capacities of 3.2TB and 6.4TB.

Uses a single-chip controller with a SATA interface on the system side and 8-channels of HLNAND Flash internally. The industry-standard 2.5-inch form factor enables interchangeability with existing hard disk drives (HDDs) and native SATA HDD drop-in replacement with the enhanced performance, reliability, ruggedness, and power savings offered by an SSD.

SVR-PRO 200 has the capacity you require for high-performance computing with exceptional reliability for storage-hungry, critical SATA based systems.

### BENEFITS

- Highest endurance SATA SSD
- High capacity SSD for big data storage
- Designed for mixed workloads
- Reduced latencies
- Lower Power Consumption
- Non-volatile Flash Memory for outstanding data retention - Less likely to fail than HDD
- Shock resistance - No moving parts enable the product to be used in tougher conditions
- Silent operation - Noiseless and low heat dissipation
- Much less heat generated than conventional HDD

### FEATURES

- Exceptional TBW performance – Up to 11,680 (6.4TB model)
- 2.5" form factor with SATA III 6Gbps interface (backwards compatible with SATA 3Gbps and SATA 1.5Gbps)
- Sequential Read up to 551MB/s and Write up 518MB/s
- Random Read IOPS up to 53K, Random Write up to 78K
- Supports S.M.A.R.T. - Self-Monitoring, Analysis and Reporting Technology
- Features an internal temperature sensor with an accuracy of +/-2°C over a range of -40°C to +125°C which can be monitored using a SMART attribute BEh
- The SSD hardware is built with a number of capacitors that ensure that the data in the write cache of the SSD is protected against corruption if a power loss was to occur, enabling the SSD to complete the last write command to the NAND flash.
- CE and FCC compliant
- 5 Year Warranty or TBW

# Product Specification: for 3.2TB, 6.4TB

CAPACITIES & INTERFACE	
Capacities available	3.2TB and 6.4TB
Form Factor	2.5 Inch
Interface	SATA III 6Gbps (also Compatible with SATA II 3Gbps and SATA 1.5Gbps)
Controller	Novachips
NAND	HLNAND MLC
DIMENSIONS	
Length mm	100.45
Width mm	69.85
Height mm	3.2TB: 7mm, 6.4TB: 15mm
Weight	3.2TB = 120g, 6.4TB 200g
Sequential Performance up to	3.2TB: Read:551MB/s Write: 517MB/s 6.4TB: Read:551MB/s Write: 518MB/s
Random Performance	3.2TB: Read 53K IOPS, Write 78K IOPS 6.4TB: Read 51K IOPS, Write 77K IOPS
Typical Latency	Read: 65us, Write: 40us
Operating Temp	0 to 70°C
Humidity	5% to 95%, non-condensing
Supply Voltage	4.5V minimum – 5.5V maximum
Power Consumption maximum (Watt)	3.2TB Sequential: Read: 5.9W / Write: 8.45W Random 4K: Read: 5W / Write 8.40W Idle: 2.78W 6.4TB Sequential: Read: 8.94W / Write:8.45W Random 4K: Read: 5.44W / Write 9.40W Idle: 3.10W

POWER CONSUMPTION	
Average (Watt)	3.2TB Sequential: Read: 3.63W / Write: 5.5W Random 4K: Read: 3.33W / Write 4.85W Idle: 2.17W  6.4TB Sequential: Read: 4.59W / Write: 6.09W Random 4K: Read: 4.03W / Write 5.17W Idle: 2.73W
Shock (operating and non operating)	1000G, duration 0.5ms
Vibration	Operating 2.17 Grms (5-700Hz, Non-Operating 3.13 Grms (5-800Hz)
Supports SMART	Yes
MTBF	1.5 Million Hours
TBW	3.2TB: 5840, 6.4TB 11680
WARRANTY	5 YEARS or TBW
Compliance	CE, FCC, RoHS
Bulk Weight	3.2TB = 120g, 6.4TB 200g
Packaged Weight	3.2TB = 178g 6.4TB = 258g
Packaged Dimensions (mm)	L = 120 W = 163 H = 31

CAPACITY	PART CODE	BARCODE (EAN)
3.2TB	INSSD3TS625SVR200SMW	5055288436282
6.4TB	INSSD6TS625SVR200SMW	5055288436299

Notes:

- Actual performance may vary and depends on use conditions, host and environment
- 4KB transfers used for Read/Write latency values.
- Typical I/O performance numbers as measured fresh-out-of-the-box (FOB) using IOMeter with a queue depth of 32 and write cache enabled.
- The product achieves a mean time between failure (MTBF) based on population statistics not relevant to individual units.
- Based on full sustained 128K random write workload
- Operating temperature is the drive case temperature as measured by the SMART temperature attribute
- Mean Time Between Failures is estimated based on JEDEC-218/219 standard methodology.
- TBW (Terabytes Written). TBW is a measurement of SSDs expected lifespan, which represents the amount of data written to the device. This is only an estimate and can differ based in user usage behaviour, platform and estimates provided by the flash vendor
- Power Consumption may differ according to flash configuration and platform

HLNAND™ is a trademark of Novachips Co., Ltd

All Specifications are subject to change without notice

1GB = 1,000,000,000 Bytes, 1TB = 1,000,000,000,000 Bytes; 1 sector = 512 Bytes.

The total usable capacity of the SSD may be less than the total physical capacity because a small portion of the capacity is used for NAND flash management and maintenance purposes.

## 3.2TB diagram (2.5" 7mm z-height)

## 6.4TB diagram 2.5" 15mm z-height

## 1.1 SUPPORTED COMMAND SETS

## 1.2 SMART

### 1.2.1 SMART SUBCOMMAND SETS

In order to select a subcommand the host must write the subcommand code to the device's Features Register before issuing the SMART Function Set command. The subcommands are listed below.

Table 2. SMART Subcommand Sets

COMMAND	COMMAND CODE (HEX)
SMART READ DATA	D0h
SMART ENABLE/DISABLE ATTRIBUTE AUTOSAVE	D2h
SMART EXECUTE OFF-LINE IMMEDIATE	D4h
SMART READ LOG	D5h
SMART WRITE LOG	D6h
SMART ENABLE OPERATIONS	D8h
SMART DISABLE OPERATIONS	D9h
SMART RETURN STATUS	DAh

### 1.2.2 SMART READ DATA (SUBCOMMAND D0H)

This subcommand returns the device's Attribute Values to the host. The Attribute Values consist of 512bytes.

Table 3. Device Attribute Data Structure

BYTE	DESCRIPTION
0~1	Data structure revision number (Vendor Specific)
2~361	1st - 30th Individual attribute data (Vendor Specific)
362	Off-line data collection status
363	Self-test execution status
364~365	Total time in seconds to complete off-line data collection activity
366	Vendor Specific
367	Off-line data collection capability
368-369	SMART capability
370	Error logging capability 7-1 Reserved 0 1=Device error logging supported
371	Self-test failure check point (Vendor Specific)
372	Short self-test routine recommended polling time(in minutes)
373	Extended self-test routine recommended polling time(in minutes)
374-510	Reserved
511	Data structure checksum

Table 4. Individual Attribute Data Structure

BYTE	DESCRIPTION
0	Attribute ID Number
1~2	Flags
3	Current Value
4	Worst Value
5~10	Attribute Value (FFFF FFFF FFFFh)
11	Reserved

Table 5. Attribute ID Numbers

ID (DEC)	ID (HEX)	ATTRIBUTE NAME	DESCRIPTION
1	01h	Vendor-specific	
9	09h	Power-On Hours	The time amount of power-on state (unit: hours)
12	0Ch	Power Cycle Count	Counts of full power on/off cycles
13	0Dh	Vendor-specific	
181	AFh	Program Failure Block Count	Counts the number of flash program failures 00~23 : flash program failure count / 24~47 : flash erase failure count
184	B8h	Initial Bad Block Count	The number of bad blocks which was detected when firmware was installed
187	BBh	Read Failure Block Count (Uncorrectable)	Uncorrectable read failure block count 00~23 : read bad block count / 24~47 : potential read bad block count
190	BEh	Temperature	Current device temperature (unit: °C)
199	C7h	SATA Error CRC Count	The number of encountered SATA interface errors 00~23 : CRC Error count / 24~47 : Handshake Error Count
200	C8h	Total count of write commands	The total number of written command during the entire lifetime of the device
201	C9h	Total count of read commands	The total number of read command during the entire lifetime of the device
202	CAh	Vendor-specific	
204	CCh	Vendor-specific	
209	D1h	SSD Life Left (Remaining Drive Life)	Indicates the approximate SSD life left [(maximum PE cycle – average erase count) / maximum PE cycle]
210	D2h	Erase Count	Indicates the minimum, average, maximum erased counts of all the blocks 00~15 : The minimum erased count 16~31 : The average erased count 32~47 : The maximum erased count
213	D5h	20h	Returns maximum PE cycle counts of flash
225	E1h	24h	
226	E2h	40h	Flush command count 00~23 : self flush count / 24~47 : host flush count
227	E3h	42h	
228	E4h	F6h	
229	E5h	F3h	
230	E6h	F4h	The current total free blocks count
241	F1h	F5h	

## 1.2.3 SMART EXECUTE OFF-LINE IMMEDIATELY (SUBCOMMAND D4H)

This subcommand causes the device to start the off-line process for the requested mode and operation. The LBA Low register shall be set to specify the operation to be executed.

Table 6. SMART Execute Off-line Immediately

LBA LOW	DESCRIPTION
00h	Execute SMART off-line data collection routine immediately
01h	Execute SMART Short self-test routine immediately in off-line mode
02h	Execute SMART Extended self-test routine immediately in off-line mode
03h	Reserved
04h	Execute SMART Selective self-test routine immediately in off-line mode
40h	Reserved
7Fh	Abort off-line mode self-test routine
81h	Execute SMART short self-test routine immediately in captive mode
82h	Execute SMART Extended self-test routine immediately in captive mode
84h	Execute SMART selective self-test routine immediately in captive mode
C0h	Reserved

### OFF-LINE MODE

The device executes command completion before executing the specified routine. During execution of the routine the device will not set BSY nor clear DRDY. If the device is in the process of performing its routine and is interrupted by a new command from the host, the device will abort or suspend its routine and service the host within two seconds after receipt of the new command. After servicing the interrupting command, the device will resume its routine automatically or not start its routine depending on the interrupting command.

### CAPTIVE MODE

When executing self-test in captive mode, the device sets BSY to one and executes the specified self-test routine after receipt of the command. At the end of the routine, the device sets the execution result in the Self-test execution status byte (see Table 7-1: "Device Attribute Data Structure" on page 23) and ATA registers and then executes the command completion. See definitions below.

**Status** - Set ERR to one when the self-test has failed

**Error** - Set ABRT to one when the self-test has failed

**LBA Low** - Set to F4h when the self-test has failed

**LBA High** - Set to 2Ch when the self-test has failed

## 1.2.4 SMART READ LOG SECTOR (SUBCOMMAND D5H)

This command returns the specified log sector content to the host. LBA Low and Sector Count Registers shall be set to specify the log sector and sector number to be written.

Table 7. SMART Read Log Sector

LOG SECTOR ADDRESS	NO. SECTOR	CONTENT	
00h	1	Log directory	Read Only
01h	1	SMART error log	Read Only
02h	51	Comprehensive SMART error log	Read Only
03h	37	Extended Comprehensive SMART error log	Read Only
06h	1	SMART self-test log	Read Only
07h	1	Extended SMART self-test log	Read Only
09h	1	Selective self-test log	Read and Write
10h	1	NCQ Error log	Read only
11h	1	SATA Phy event counter log	Read only
80h-9Fh	32	Host vendor specific	Read and Write
A0h	1	Reserved	Vendor Specific

Table 8. SMART Log DirectoryTable

BYTE	DESCRIPTION
0~1	SMART Logging Version (set to 01h)
2~3	Number of sectors in the log at log address 1
4~5	Number of sectors in the log at log address 2
...	
510~511	Number of sectors in the log at log address 255

Table 9. Self-test log structureTable 5.

BYTE	DESCRIPTION
0~1	Data structure revision
n*24+2	Self-test number
n*24+3	Self-test execution status
n*24+4~n*24+5	Life timestamp
n*24+6	Self-test failure check point
n*24+7~n*24+10	LBA of first failure
n*24+11~n*24+25	Vendor specific
.....	.....
506~507	Vendor specific
508	Self-test log pointer
509~510	Reserved
511	Data structure checksum

N is 0 through 20

The data structure contains the descriptor of the Self-test that the device has performed. Each descriptor is 24 bytes long and the self-test data structure is capable to contain up to 21 descriptors. After 21 descriptors have been recorded, the oldest descriptor will be overwritten with the new descriptor. The self-test log pointer points to the most recent descriptor. When there is no descriptor, the value is 0. When there are descriptor(s), the value is 1 through 21.

Table 10. Selective self-test log structure

BYTE	CONTENT	REMARKS
0-1	Data structure revision	Read and Write
2-9	Starting LBA for test span 1	Read and Write
10-17	Ending LBA for test span 1	Read and Write
18-25	Starting LBA for test span 2	Read and Write
26-33	Ending LBA for test span 2	Read and Write
34-41	Starting LBA for test span 3	Read and Write
42-49	Ending LBA for test span 3	Read and Write
50-57	Starting LBA for test span 4	Read and Write
58-65	Ending LBA for test span 4+	Read and Write
66-73	Starting LBA for test span 5	Read and Write
74-81	Ending LBA for test span 5	Read and Write
82-337	Reserved	Reserved
338-491	Vendor specific	Vendor specific
492-499	Current LBA under test	Read
500-501	Current span under test	Read
502-503	Feature flags R/W	Read and Write
504-507	Vendor Specific	Vendor specific
508-509	Selective self test pending time	Read and Write
510	Reserved	Reserved
511	Data structure checksum	Read and Write

### 1.2.5 SMART WRITE LOG SECTOR (SUBCOMMAND D6H)

This command writes 512 bytes of data to the specified log sector. LBA Low and Sector Count registers shall be set to specify the log address and sector number to be written.

### 1.2.6 SMART ENABLE OPERATIONS (SUBCOMMAND D8H)

This subcommand enables access to all SMART capabilities. Prior to receipt of a SMART Enable Operations subcommand, Attribute Values are neither monitored nor saved by the device. The state of SMART—either enabled or disabled—will be preserved by the device across power cycles. Once enabled, the receipt of subsequent SMART Enable Operations subcommands will not affect any of the Attribute Values.

### 1.2.7 SMART DISABLE OPERATIONS (SUBCOMMAND D9H)

This subcommand disables all SMART capabilities. After receipt of this subcommand the device disables all SMART operations. Non self-preserved Attribute Values will no longer be monitored. The state of SMART - either enabled or disabled - is preserved by the device across power cycles. Note that this subcommand does not preclude the device's power mode attribute auto saving.

After receipt of the SMART Disable Operations subcommand from the host, all other SMART subcommands except SMART Enable Operations are disabled and will be aborted by the device returning the error code as specified in "SMART Error Codes".

Any Attribute Values accumulated and saved to volatile memory prior to receipt of the SMART Disable Operations command will be preserved in the device's Attribute Data Sectors. If the device is re-enabled, these Attribute Values will be updated, as needed, upon receipt of a SMART Read Attribute Values or a SMART Save Attribute Values command.

### 1.2.8 SMART RETURN STATUS (SUBCOMMAND DAH)

This subcommand is used to communicate the reliability status of the device to the host's request. Upon receipt of the SMART Return Status subcommand the device saves any updated Attribute Values to the reserved sector, and compares the updated Attribute Values to the Attribute Thresholds.

## 1.3 IDENTIFY DEVICE COMMAND DATA

Table 11. Returned Sector Data

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
0	X	0040h	General configuration bit-significant information
1	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
2	V	C837h	Specific configuration
3	X	0010h	Obsolete - Number of logical heads (16)
4-5	X	0h	Retired
6	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
7-8	V	0h	Reserved for assignment by the CompactFlash* Association (CFA)
9	X	0h	Retired
10-19	F	varies	Serial number (20 ASCII characters)
20-21	X	0h	Retired
22	X	0000h	Obsolete
23-26	F	varies	Firmware revision (8 ASCII characters)
27-46	F	varies	Model number
47	F	8001h	Maximum number of sectors transferred per interrupt on multiple commands
48	F	4000h	Trusted Computing Feature Set
49	<b>F</b>	2F00h	Capabilities
50	F	4000h	Capabilities
51-52	X	0h	Obsolete
53	F	0007h	Words 88 and 70:64 valid
54	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
55	X	0010h	Obsolete - Number of logical heads (16)
56	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
57-58	X	0h	Obsolete
59	F	0101 h	Number of sectors transferred per interrupt on multiple commands
60-62	V	varies	Total number of user-addressable sector
63	X	0407h	Multi-word DMA modes supported/selected
64	F	0003h	PIO modes supported
65	F	0078h	Minimum multiword DMA transfer cycle time per word
66	F	0078h	Manufacturer's recommended multiword DMA transfer cycle time
67	F	0078h	Minimum PIO transfer cycle time without flow control
68	F	0078h	Minimum PIO transfer cycle time with IORDY flow control
69	F	4020h	Additional Supported
70	F	0000h	Reserved
71-74	F	0h	Reserved for IDENTIFY PACKET DEVICE command
75	F	001Fh	Queue depth
76	F	050Eh	Serial ATA capabilities
77	F	0006h	Reserved for future Serial ATA definition
78	F	0044h	Serial ATA features supported
79	V	0044h	Serial ATA features enabled
80	F	01E0h	Major version number

NOTES:

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
81	F	0000h	Minor version number
82	F	346Bh	Command set supported
83	F	7D01h	Command sets supported
84	F	4122h	Command set/feature supported extension
85	V	3469h	Command set/feature enabled
86	V	3C01h	Command set/feature enabled
87	V	4122h	Command set/feature default
88	V	007Fh	Ultra DMA Modes
89	F	0004h	Time required for security erase unit completion
90	F	0004h	Time required for enhanced security erase completion
91	V	0000h	Current advanced power management value
92	V	FFFEh	Master Password Revision Code
93	X	0000h	Hardware reset result: the contents of bits (12:0) of this word shall change only during the execution of a hardware reset
94	V	0000h	Vendor's recommended and actual acoustic management value
95	F	0000h	Stream minimum request size
96	V	0000h	Streaming transfer time - DMA
97	V	0000h	Streaming access latency - DMA and PIO
98-99	F	0000h	Streaming performance granularity
100-103	V	Varies	Maximum user LBA for 48-bit address feature set
104	V	0000h	Streaming transfer time - PIO
105	V	0001h	Maximum number of 512-byte blocks of LBA Range Entries per DATASET MANAGEMENT command
106	F	4000h	Physical sector size / logical sector size
107	F	0000h	Inter-seek delay for ISO-7779 acoustic testing in microseconds
108-111	F	varies	Unique ID
112-115	F	0h	Reserved for world wide name extension to 128 bits
116	V	0000h	Reserved for technical report
117-118	F	0h	Words per logical sector
119	F	0000h	Supported settings
120	F	0000h	Command set/feature enabled/supported
121-126	F	0h	Reserved
127	X	0000h	Removable Media Status Notification feature set support
128	V	0001h	Security status
129	V	0000h	Vendor-specific
130-159	X	0h	Vendor-specific
160	X	0000h	CompactFlash Association (CFA) power mode 1
161-167	X	0h	Reserved for assignment by the CFA
168	X	0003h	Reserved for assignment by the CFA
169	X	0001h	Data set management Trim attribute support
170-175	F	0h	Reserved for assignment by the CFA
176-205	X	0h	Current media serial number
206	X	0000h	SCT Command Transport
207-208	F	0h	Reserved
209	X	4000h	Alignment of logical blocks within a physical block

**NOTES:**

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.

WORD	F=FIXED V=VARIABLE X=BOTH	ATTRIBUTE NAME	DESCRIPTION
210-211	V	0h	Write-Read-Verify Sector Count Mode 3 (DWord)
212-213	F	0h	Write-Read-Verify Sector Count Mode 2 (DWord)
214	X	0000h	NV Cache Capabilities
215-216	V	0h	NV Cache Size in Logical Blocks (DWord)
217	F	0001h	Nominal media rotation rate
218	V	0000h	Reserved
219	F	0000h	NV Cache Options
220	V	0000h	Write-Read-Verify feature set
221	X	0000h	Reserved
222	F	103Fh	Transport major version number
223	F	0000h	Transport minor version number
224-229	F	0h	Reserved
230-233	X	0h	Extended Number of User Addressable Sectors (QWord)
234	F	0000h	Minimum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
235	F	0000h	Maximum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
236-254	X	0h	Reserved
255	V	varies	Integrity word
